FinSight

"AI That Helps You Understand Your Money"

Theme:

AI for Financial Literacy

Target SDGs:

SDG 4: Quality Education
SDG 9: Industry, Innovation & Infrastructure
SDG 10: Reduced Inequalities

Prepared By:

Team Gardenia

The Problems

People Have Low Financial Literacy

- Do not fully understand how financial tools (eg. Buy Now Pay Later) works
- Do not have awareness of preparing emergency funds

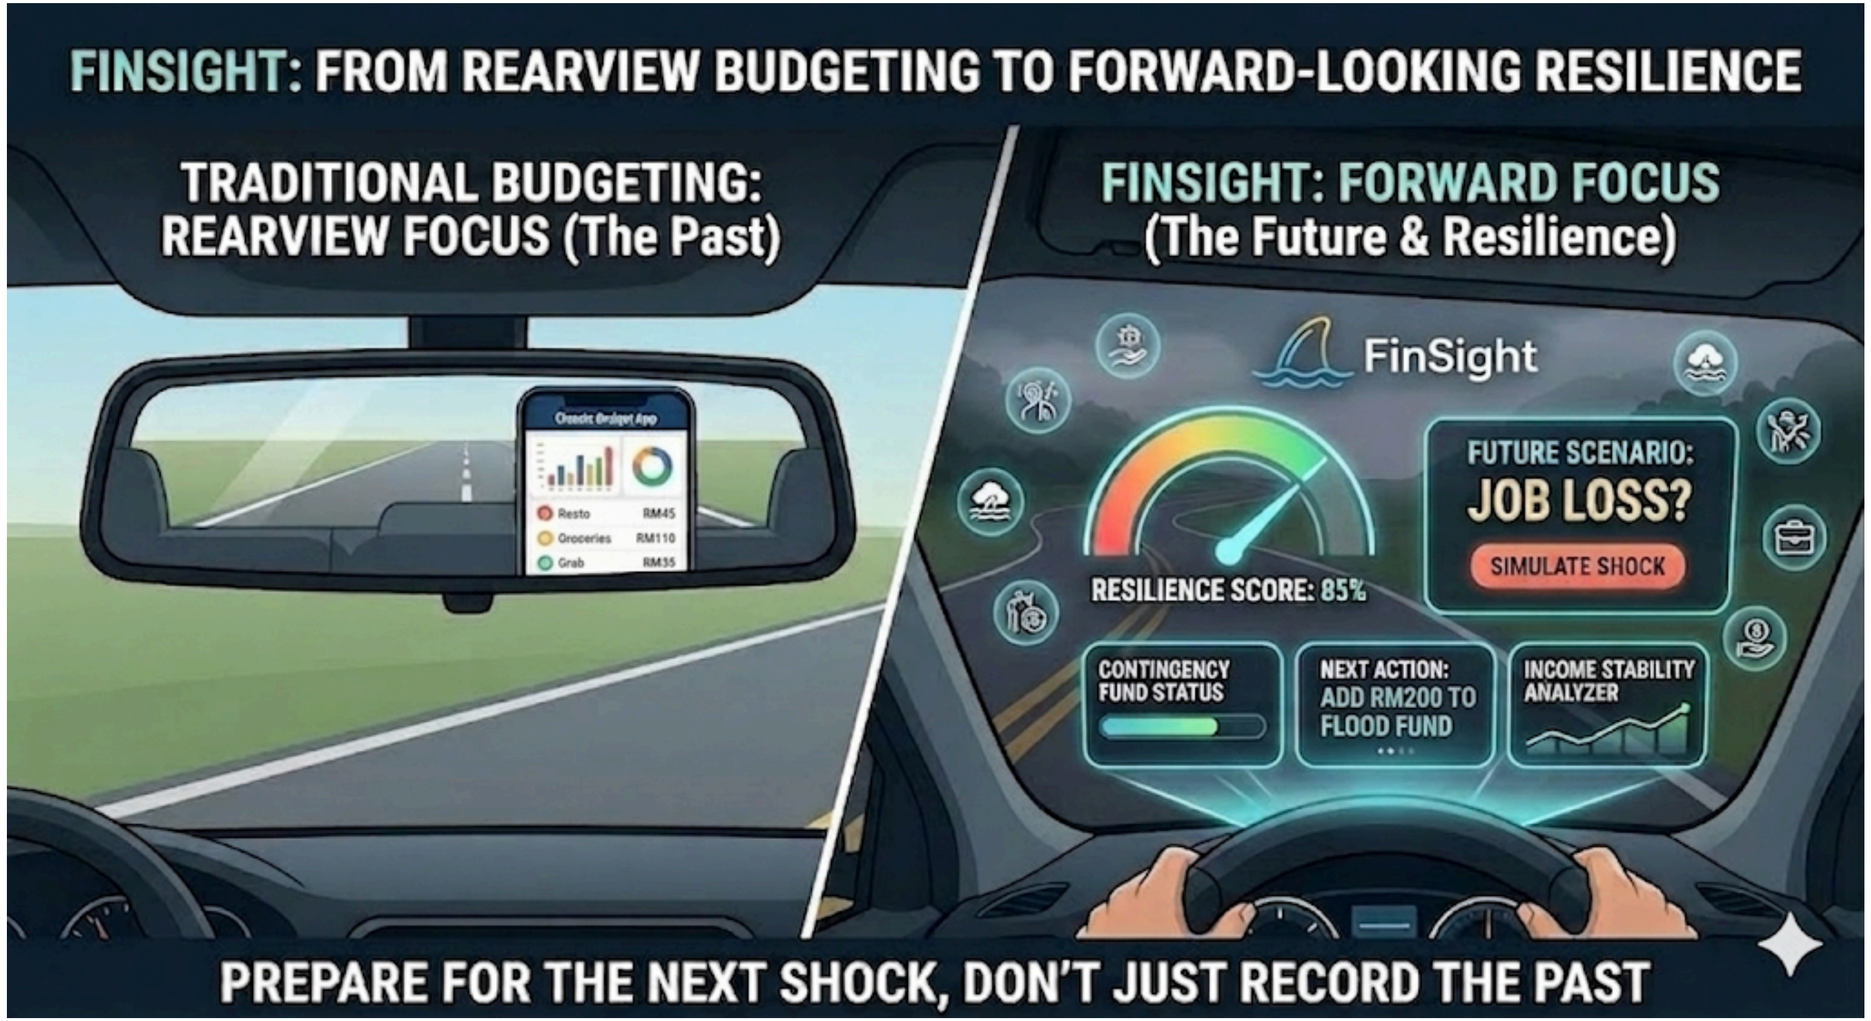
Facts :
Studies by The Currency shows that 1 in 5 adults have no emergency savings, leaving them financially vulnerable when unexpected expenses occur.

The Problems

Lack of Personalized Financial Guidance

Most financial tools provide generic advice rather than tailored insights based on individual spending patterns, income levels, and financial goals.

Key Differences



Our Solution

Automatically captures transactions from user-approved bank and e-wallet notifications to track spending

AI analyzes users' spending patterns to identify financial behaviors and highlight potential risks

FinSight

Generates personalized financial insights and recommendations

Simulates potential financial shocks to encourage better emergency planning

Key Differences

Feature	FinSight	YNXB	Monarch Monxy	Monxy Lover
Intelligent Notification Tracker	✓ **Auto-detect transactions** from wallets and bank (Touch 'n Go etc.)	✗	✓ Bank sync only	Limited
Automatic Expenses Recording	✓ No manual typing entry required	✗	✓ Bank sync only	Mostly Manual
Receipt Caputure (OCR+CV)	✓ Scan receipts/ invoice to log expenses	✗	✗	Partial

Key Differences (cont.)

Feature	FinSight	YNXB	Monarch Monxy	Monxy Lover
Agentic AI Financial Coach	✓ Personalized financial guidance & resilience chat	✗	✓ Limited insights	✗
Financial Shock Simulation	✓ Job / Illness / Disaster / War	✗	✗	✗
ASEAN-first Ecosystem	✓ Designed for ASEAN spending habits	✗	✗	Partial

Tech Stack

Frontend

React Native

- Build UI
- Provide a user-friendly experience across devices.

Backend

- Handles API requests, processes financial data, and connects the frontend with the database and AI services.

Database

MySQL®

- Stores structured financial data such as transactions, spending patterns, and user financial metrics securely.

AI & External Knowledge Retrieval

Gemini

tavily

Tech Stack (cont.)

Web Architecture

Since the Python FastAPI backend is run on port 8000, and we want it to listen on a subdomain name, a reverse proxy is used to achieve that.

- Web Server + Reverse Proxy: Apache HTTP Server
- SSL/TLS: Let's Encrypt via Certbot to automate certificate application and installation
- DNS: Berkeley Internet Name Domain (BIND)
- Firewall: Firewalld

Server Infrastructure

- Host: Oracle Cloud Infrastructure's Ampere A1 instance
- Architecture: ARM64 (aarch64)
- OS: Oracle Linux Server 10.1
- Kernel: Linux 6.12.0 LTS with UEK (Unbreakable Enterprise Kernel)

Backend Deployment

- Container: Docker
- Orchestration: Docker Build, and a custom Bash script for fetching and pulling from upstream, optionally rebuilding if there are changes

Thank You
